

SHOW & TOOL

Danish Dynaword: Open source development for LLMs and their data

Join **ECHOLab's Show & Tool** session showcasing **Dynaword** with **Kenneth Christian Enevoldsen**, Assistant Professor and Open Source Developer at the Center for Humanities Computing, Aarhus University.

Much of science is built on an open source foundation, where continuous iterations improve the tools or methods. The multiple contributions by a broad range of users ensure that the tool is performant, safe, democratic, and trusted.

However, for AI we do not see similar open source development. While we have seen open source releases, there are often no ways for contributors to join in and contribute. This means that open source AI models are rarely built on top of each previous release, but are instead developed independently.

We introduce a **Dynaword** approach for open-source development of LLMs datasets as an example to show that this trend need not continue and show that providing the right setup can ensure promising open source contribution from both research, industry, and government institutions.

28.05.2026

WHERE & WHEN

DTU Kgs Lyngby, ECHOLab
Building 424, Room 201
12:00 - 13:00

REGISTRATION AND CONTACT

No registration needed. Bring your lunch for informal sharing of tips, tricks and reflections on tools and methods. For further questions, please contact tssin@dtu.dk.
